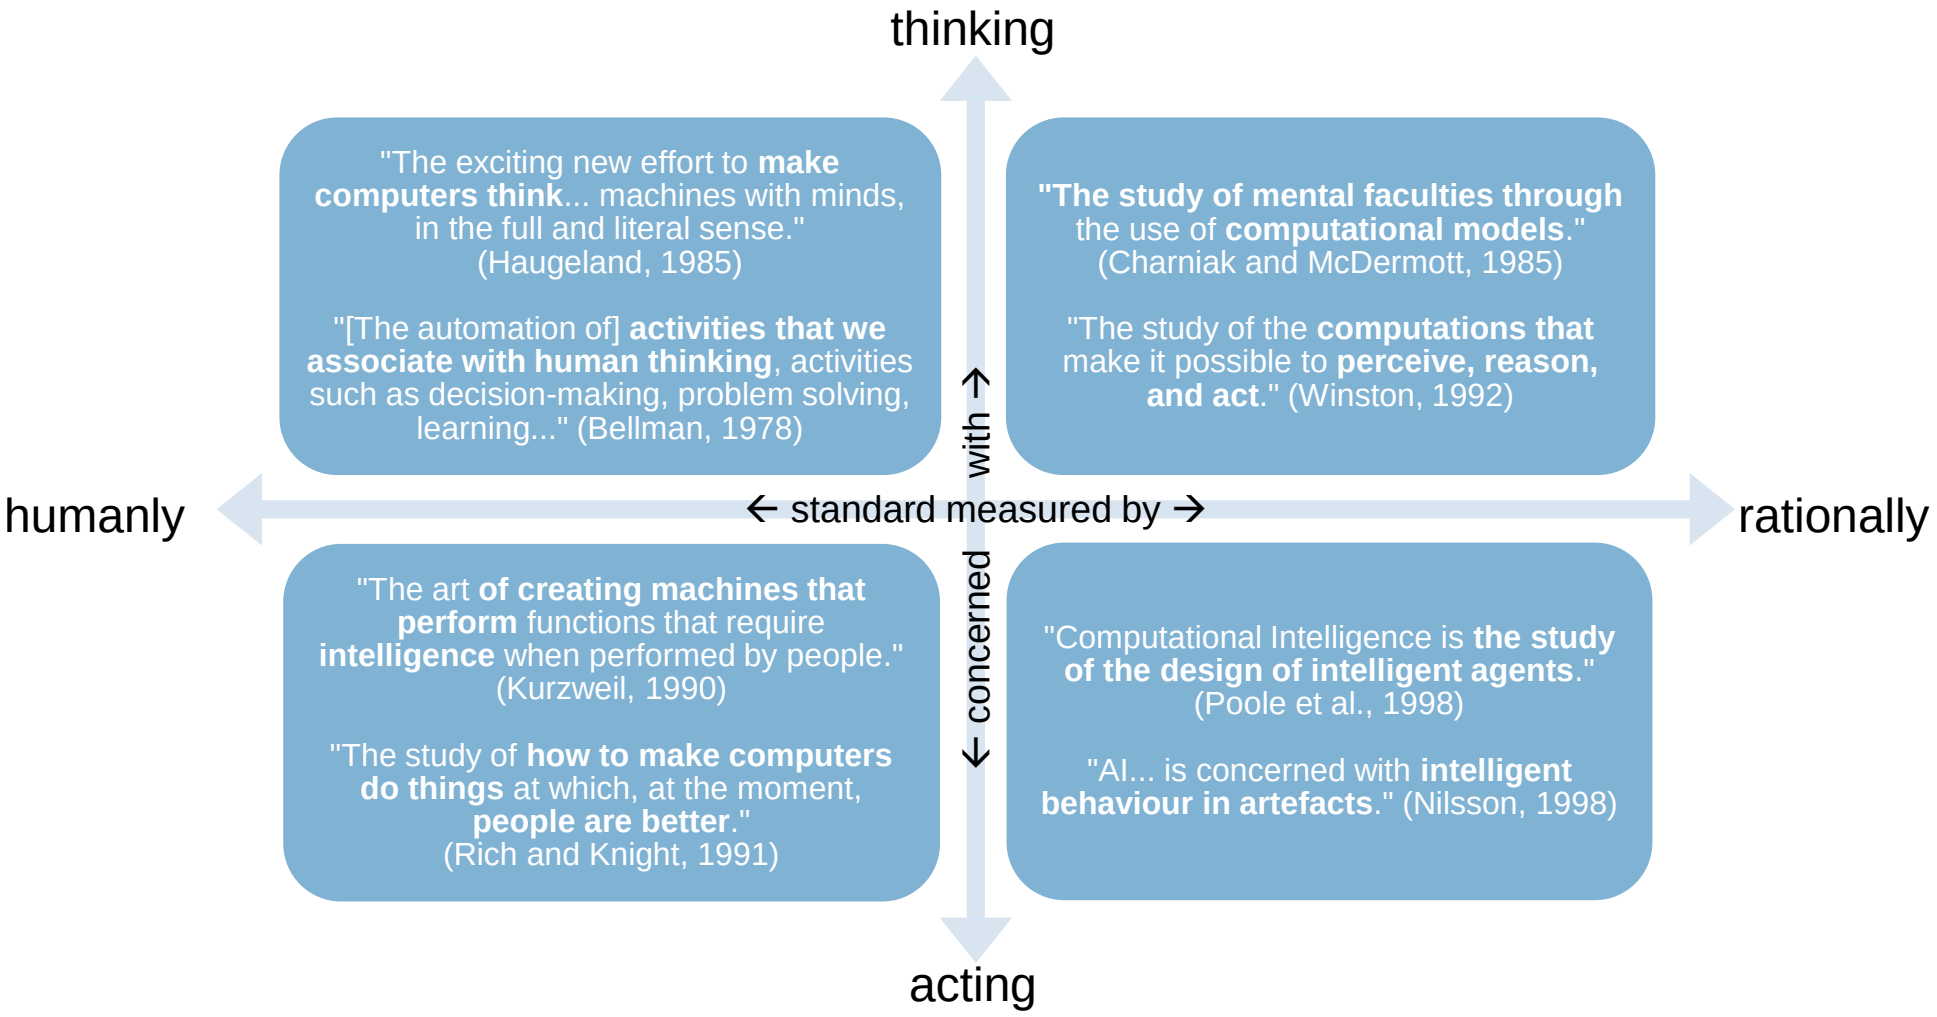
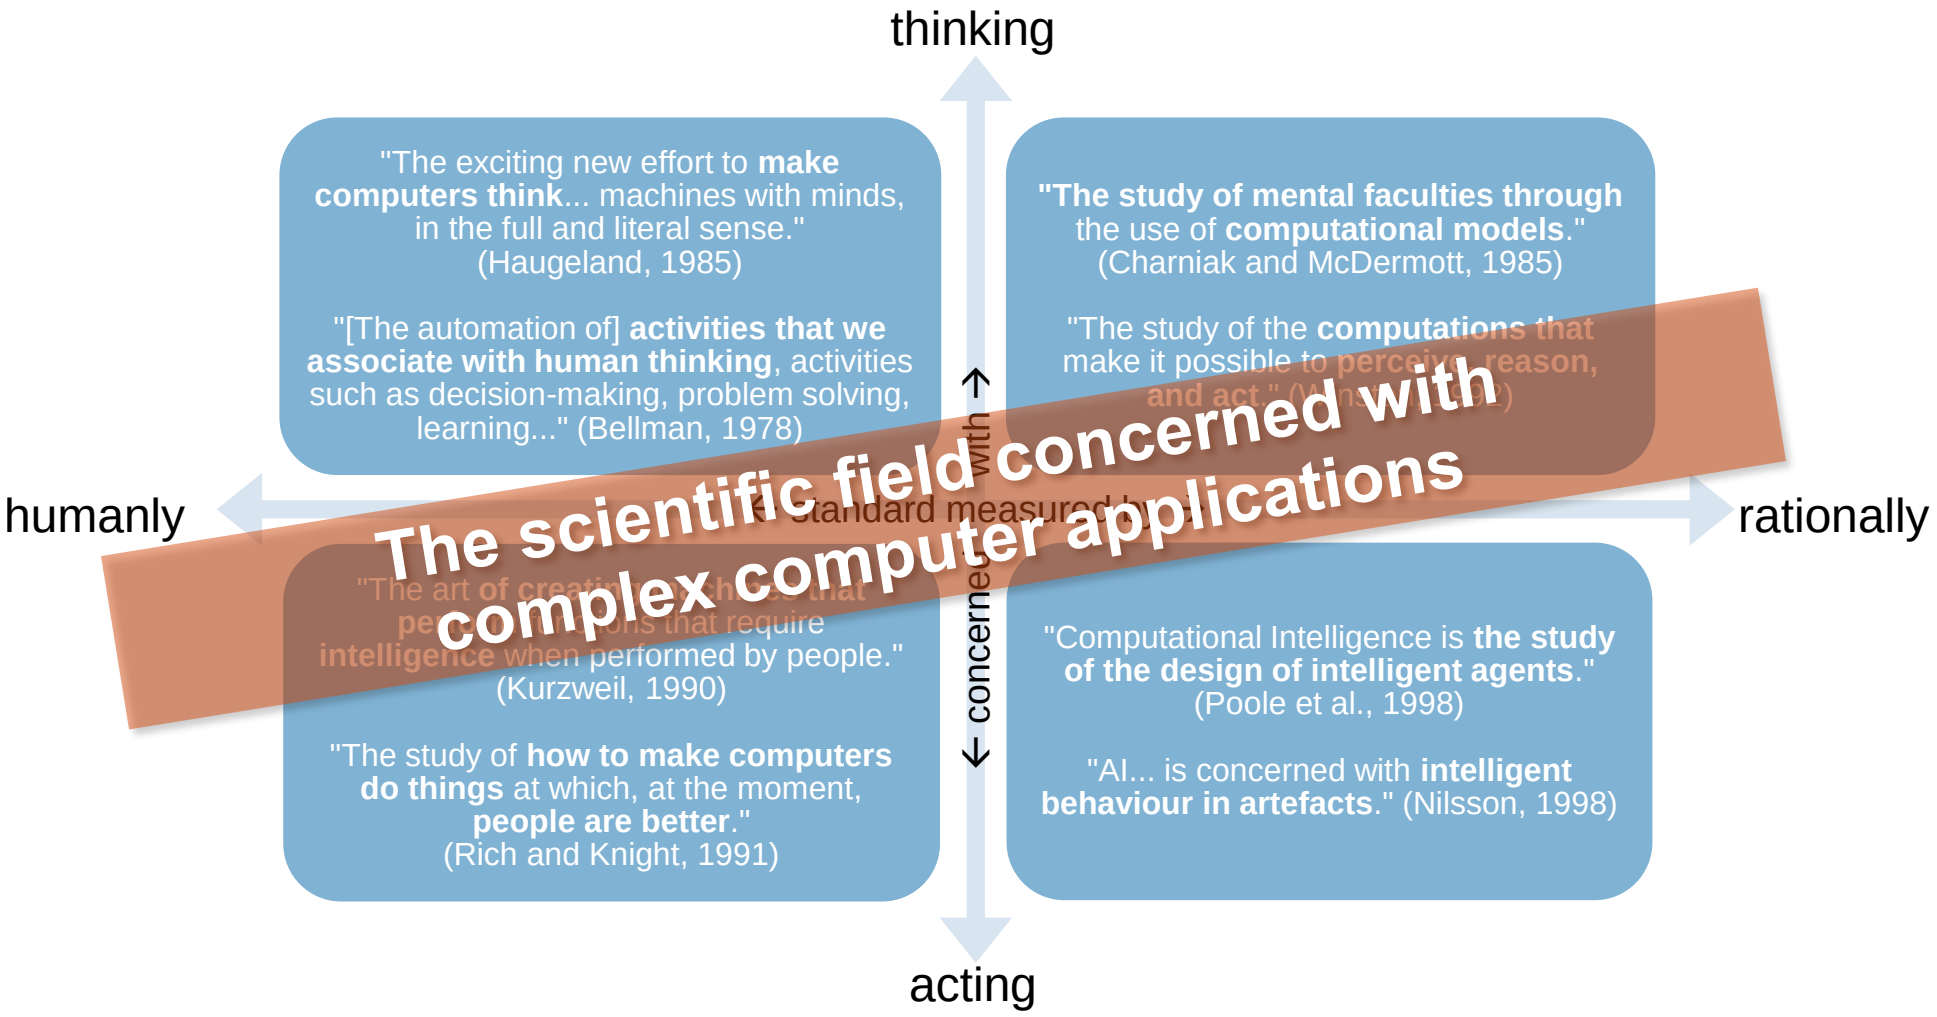
Was ist Künstliche Intelligenz?

Was ist künstliche Intelligenz?



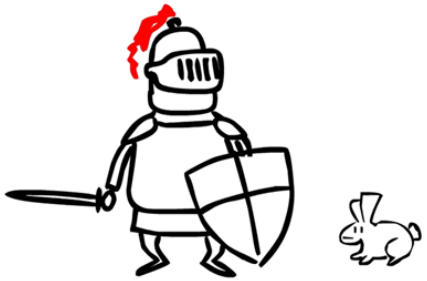
Was ist künstliche Intelligenz?

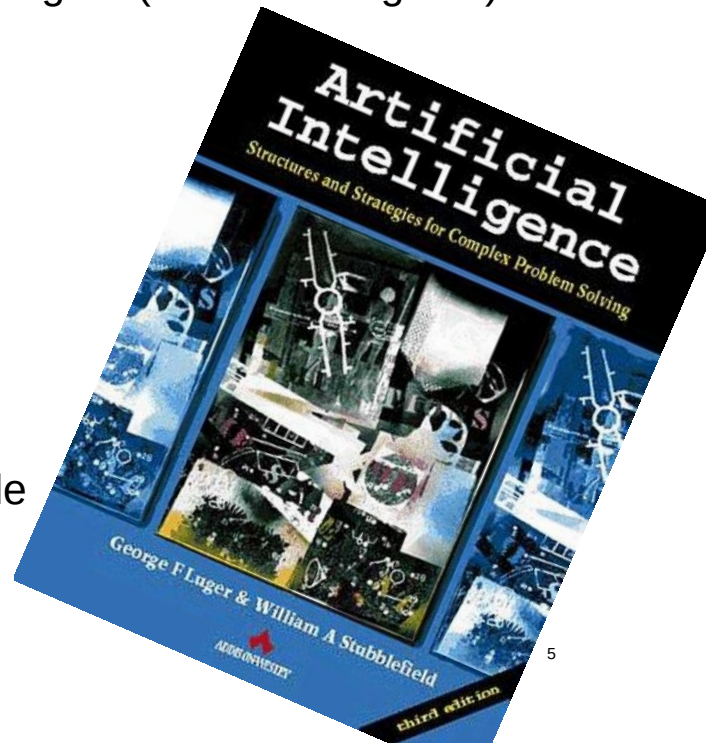


Pragmatisches Designparadigma: Rationale Agenten

Agents
- an **entity that perceives and acts**
- a **function from percept** histories **to actions** $f: P^* \rightarrow A$

Rational agents
- **For any** given class of **environment**s and **task**s, we **seek** the agent (or class of agents) with the **best performance**





Caveat
- Computational limitations make perfect rationality unachievable
  ➔ **Design best program for given machine resources**

Google Acquires Artificial Intelligence Startup DeepMind For More Than $500M

Posted Jan 26, 2014 by Catherine Shu (@catherineshu)

Google will buy London-based artificial intelligence company DeepMind. The Information reports that the acquisition price was more than $500 million, and that Facebook was also in talks to buy the startup late last year. DeepMind confirmed the acquisition to us, but couldn't disclose deal terms.

The acquisition was originally confirmed by Google to Re/code.

Computing

Algorithm Clones Van Gogh's Artistic Style and Pastes It onto Other Images, Movies

A deep neural network has learned to transfer artistic styles to other images.

by Emerging Technology from the arXiv May 10, 2016

The nature of artistic style is something of a mystery to most people. Think of Vincent Van Gogh's *Starry Night*, Picasso's work on cubism, or Edvard Munch's *The Scream*. All have a powerful, unique style that humans recognize easily.

Deep neural networks can now transfer the style of one photo onto another

And the results are impressive

by James Vincent | @jjvincent | Mar 30, 2017, 1:53pm EDT

You've probably heard of an AI technique known as "style transfer" — or, if you haven't heard of it, you've seen it. The process uses neural networks to apply the look and feel of one image to another, and appears in apps like Prisma and Facebook. These style transfers, however, are stylistic, not photorealistic. They look good because they look like they've been painted. Now a group of researchers from Cornell University and Adobe have augmented

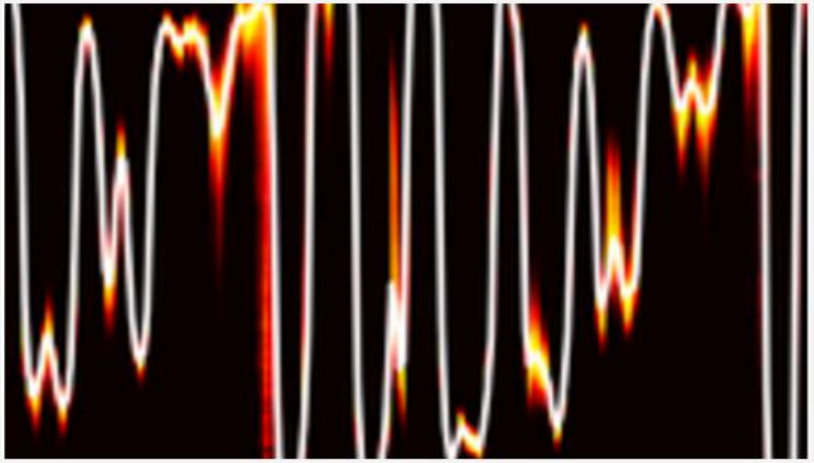
Künstliche Intelligenz

WaveNet lässt Computersprache natürlich klingen

von Henning Steier / 12.9.2016, 10:05 Uhr

Die Google-Tochter DeepMind hat ein neuronales Netz präsentiert, das Rechner fast wie Menschen klingen lässt. Es macht auch Musik.

KOMMENTARE



DeepMind lässt WaveNet Sprachwellen erzeugen. (Symbolbild: PD)

Die Google-Tochter DeepMind machte zuletzt mit ihrem Sieg beim Spiel «Go» Schlagzeilen: Ihre Software AlphaGo schlug im Frühjahr einen der besten menschlichen Spieler, Lee Sedol. Nun hat das Londoner Unternehmen WaveNet präsentiert: Dieses neuronale Netz erzeugt Sprache, die sehr natürlich klingt – zumindest wenn man die im Blogeintrag des Unternehmens zu hörenden Klangbeispiele als Massstab nimmt. Man hat sogar das Gefühl, Atempausen zu hören.

Intro

What if you could imitate a famous celebrity's voice or sing like a famous singer? This project started with a goal to convert someone's voice to a specific target voice. So called, it's voice style transfer. We worked on this project that aims to convert someone's voice to a famous English actress Kate Winslet's voice. We implemented a deep neural networks to achieve that and more than 2 hours of audio book sentences read by Kate Winslet are used as a dataset.

Model Architecture

This is a many-to-one voice conversion system. The main significance of this work is that we could generate a target speaker's utterances without parallel data like <source's wav, target's wav>, <wav, text> or <wav, phone>, but only waveforms of the target speaker. (To make these parallel datasets needs a lot of effort.) All we need in this project is a number of waveforms of the target speaker's utterances and only a small set of <wav, phone> pairs from a number of anonymous speakers.

Image Completion with Deep Learning in TensorFlow

August 9, 2016

- Introduction
- Step 1: Interpreting images as samples from a probability distribution
  - How would you fill in the missing information?
  - But where does statistics fit in? These are images.
  - So how can we complete images?
- Step 2: Quickly generating fake images
  - Learning to generate new samples from an unknown probability distribution
  - [ML-Heavy] Generative Adversarial Net (GAN) building blocks
  - Using $G(z)$ to produce fake images
  - [ML-Heavy] Training DCGANs
  - Existing GAN
  - [ML-Heavy]
  - Running DCG
- Step 3: Finding the

The amazing power of word vectors

APRIL 21, 2016

For today's post, I've drawn material not just from one paper, but from five! The subject matter is 'word2vec' – the work of Mikolov et al. at Google on efficient vector representations of words (and what you can do with them). The papers are:

- **Efficient Estimation of Word Representations in Vector Space** – Mikolov et al. 2013
- **Distributed Representations of Words and Phrases and their Compositionality** – Mikolov et al. 2013
- **Linguistic Regularities in Continuous Space Word Representations** – Mikolov et al. 2013
- **word2vec Parameter Learning Explained** – Rong 2014
- **word2vec Explained: Deriving Mikolov et al's Negative Sampling Word-Embedding Method** – Goldberg and Levy 2014

From the first of these papers ('Efficient estimation…') we get a description of the *Continuous Bag-of-Words* and *Continuous Skip-gram* models for learning word vectors (we'll talk about what a word vector is in a moment…). From the second paper we get more illustrations of the power of word vectors, some additional information on optimisations for the skip-gram model (hierarchical softmax and negative sampling), and a discussion

Schlussfolgerungen

- Deep Learning hat zu Paradigmenwechsel in *Mustererkennungsaufgaben* geführt
- Die Zeit vom Grundlagenresultat zur praktischer Anwendung beträgt wenige Monate
- Es gibt Methoden zum Hineinschauen in neuronale Black Boxes (siehe Anhang)
- «~~Denkende~~ rechnende» Maschinen sind trotzdem nur *insel(-hoch-)begabt*
  ➔ *Herausforderungen bestehen im Bereich Robustheit, Interpretierbarkeit, rechtl. Stellung*
