Music scanning

Die Forelle.

Gedicht von Chr. Fr. D. Schubart.

Für eine Singstimme mit Begleitung des Pianoforte

componirt von

FRANZ SCHUBERT.

Erste Ausgabe.

Mässig.

Singstimme.

Pianoforte.

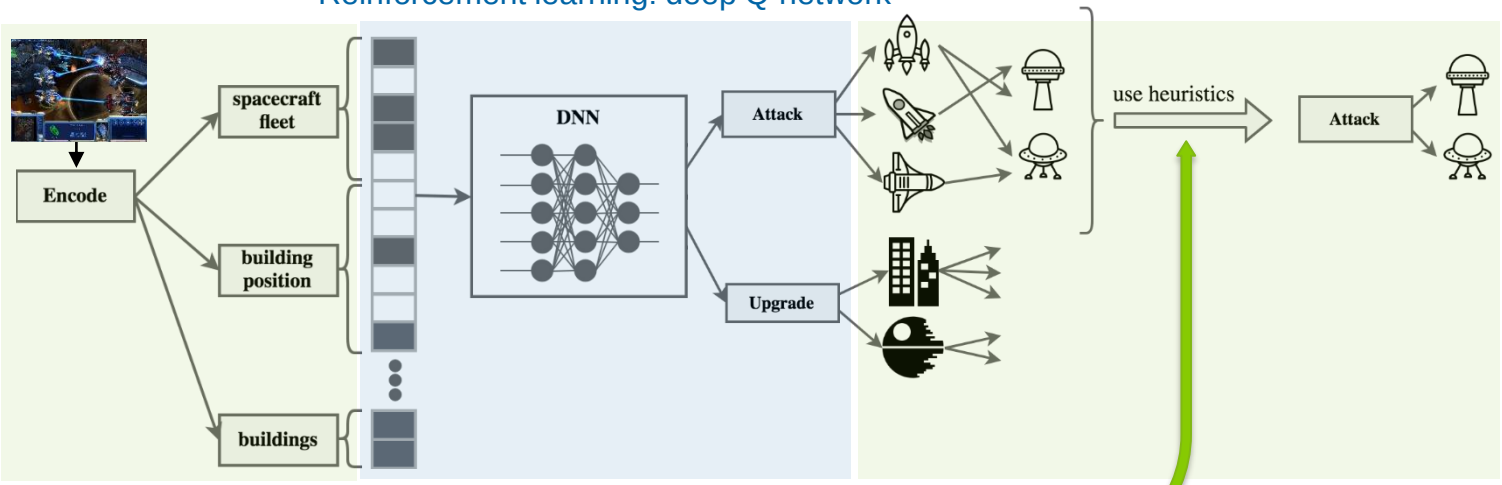
Game playing

(symbolic figure)

Game playing – challenges & solutions

Reinforcement learning: deep Q network



Large discrete action space → use heuristic

- makes exploration difficult
- elongates training time

Delayed and sparse reward → do reward shaping

- sequence of actions crucial to get a reward

Distance encoding → use reference points

Transfer Learning → difficult: more complex environment needs other action sequence

Stadelmann, Duivesteijn, Amirian, Tuggener, Elezi, Geiger & Rombach (2018). *«Deep Learning in the Wild»*. ANNPR'2018.

Lessons learned

Data is key.

- Many real-world projects miss the required **quantity & quality** of data
  → even though «big data» is not needed
- **Class imbalance** needs careful dealing
  → special loss, resampling (also in unorthodox ways)

Robustness is important.

- **Training processes** can be tricky, booth in deep- and reinforcement learning
  → give hints via a unique loss, reward shaping and preprocessing
- **Risk minimization** instead of error minimization
  → detect all defects at the expense lower precision

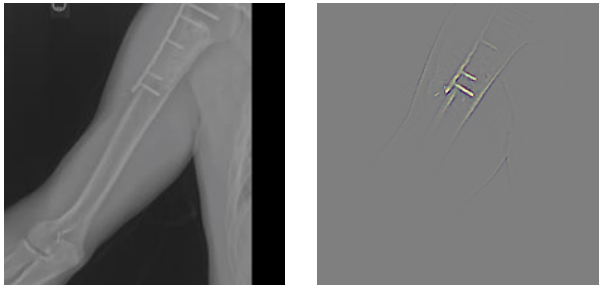
Lessons learned – model interpretability

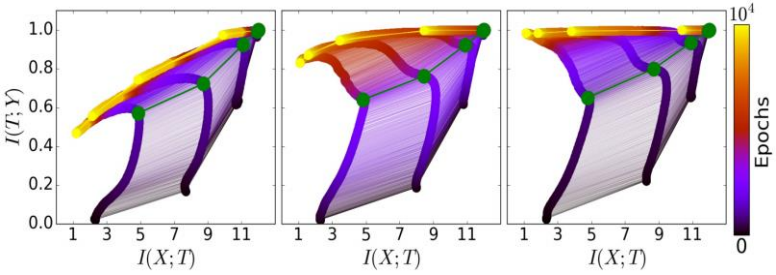
Interpretability is required.

- Helps the developer in «debugging», needed by the user to trust
  → visualizations of learned features, training process, learning curves etc. should be «always on»

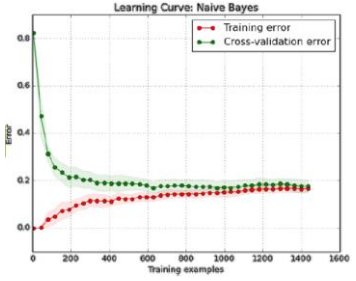
negative X-ray

positive X-ray

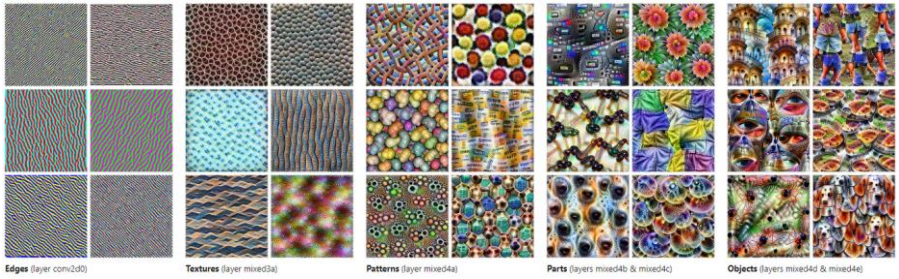




DNN training on the Information Plane



a learning curve



feature visualization

Schwartz-Ziv & Tishby (2017). *«Opening the Black Box of Deep Neural Networks via Information»*.
https://distill.pub/2017/feature-visualization/, https://stanfordmlgroup.github.io/competitions/mura/
Stadelmann, Duivesteijn, Amirian, Tuggener, Elezi, Geiger & Rombach (2018). *«Deep Learning in the Wild»*. ANNPR'2018.

Conclusions

- Deep learning **is applied** and deployed in «normal» businesses (non-AI, SME)
- It does not need big-, but some **data** (**effort usually underestimated**)
- DL/RL **training** for new use cases **can be tricky** (→ needs thorough experimentation)
- New **theory and visualizations** help to debug & understand
  → *the training process*
  → *individual results*
