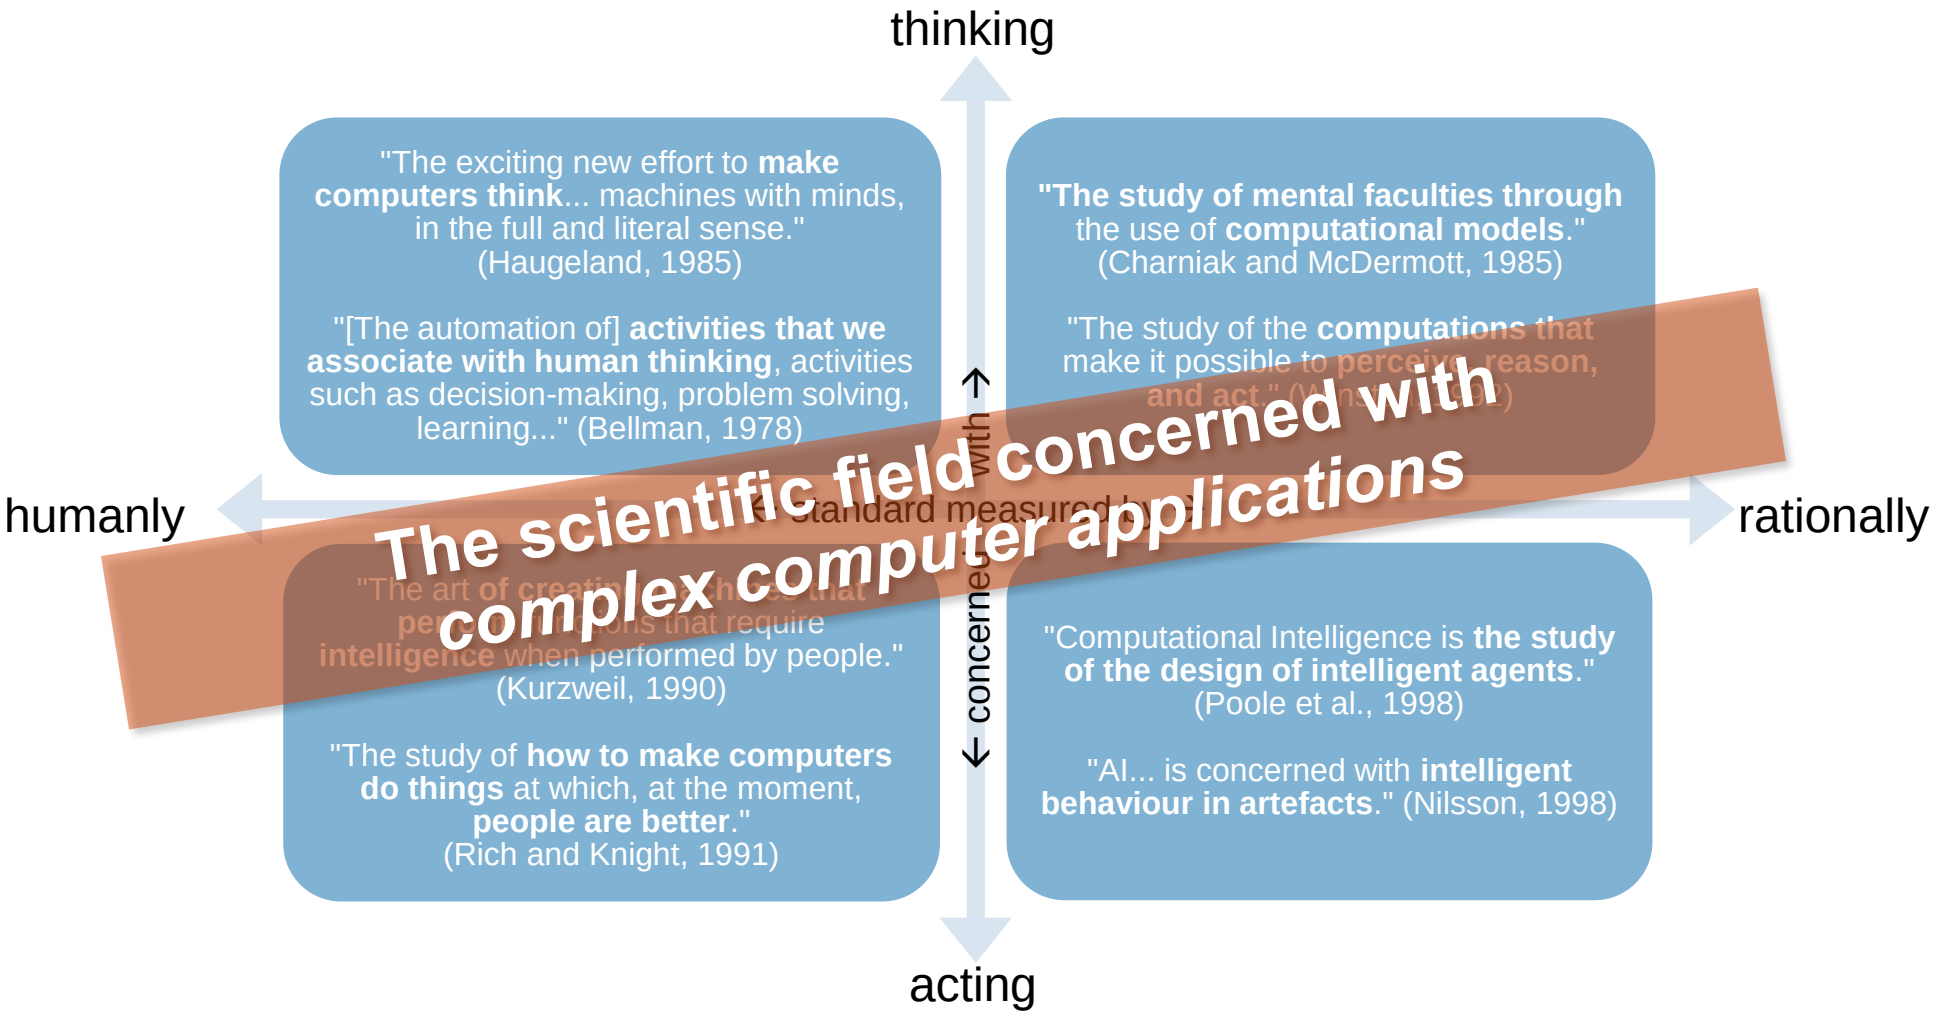
Was ist Künstliche Intelligenz?

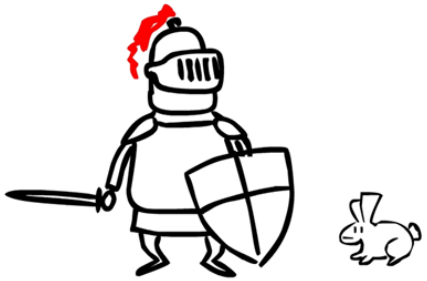
Was ist künstliche Intelligenz?

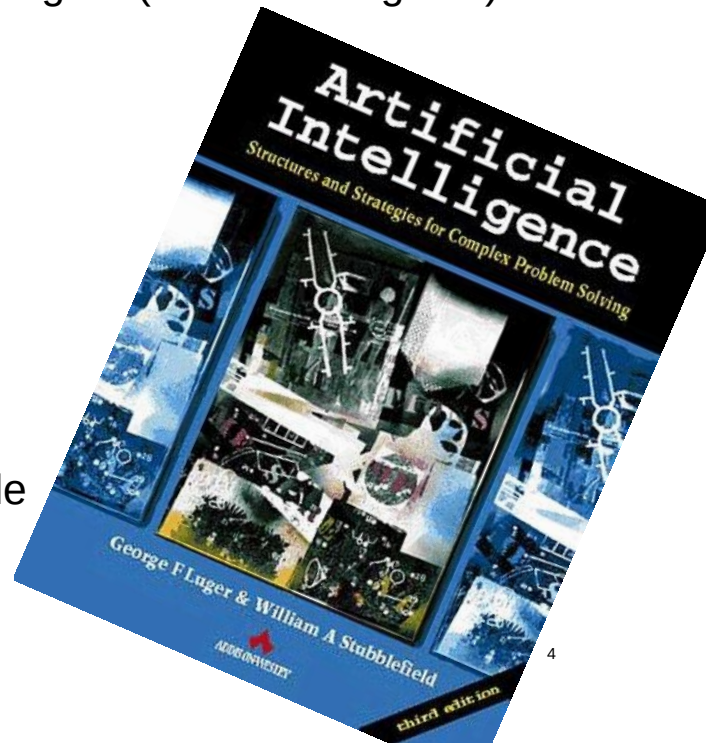


Pragmatisches Designparadigma: Rationale Agenten

Agents
- an **entity that perceives and acts**
- a **function from percept** histories **to actions** $f: P^* \rightarrow A$

Rational agents
- **For any** given class of **environment**s and **task**s, we **seek** the agent (or class of agents) with the **best performance**





Caveat
- Computational limitations make perfect rationality unachievable
  ➔ **Design best program for given machine resources**

Was gehört zu künstlicher Intelligenz?

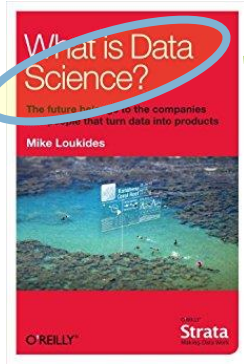
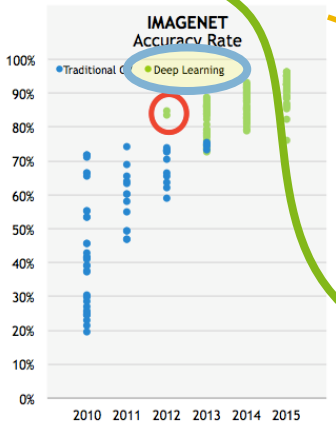
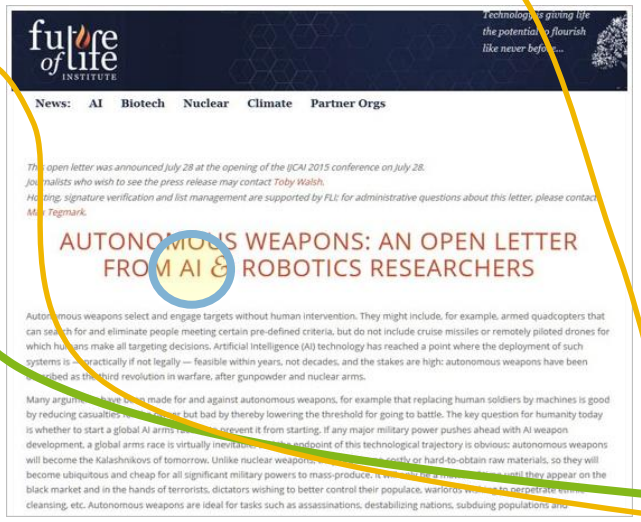
...

2007 2012 2016







Was kann KI bereits heute?

1.	Play a decent game of **table tennis**	ok
2.	**Drive** safely along a curving **mountain road**	ok
3.	Drive safely along **Technikumstrasse** Winterthur	ok (only since recently)
4.	**Buy** a week's worth of **groceries on the web**	ok
5.	Buy a week's worth of groceries **at Migros**	no
6.	**Play** a decent game of **bridge**	ok
7.	**Discover** and prove a new mathematical **theorem**	not complet
8.	**Design** and execute a **research program** in molecular biology	not complet
9.	Write an **intentionally funny** story	no
10.	Give competent **legal advice** in a specialized area of law	ok
11.	**Translate** spoken English **into spoken** Swedish in real time	ok
12.	**Converse** successfully with another person for an hour	no
13.	Perform a complex **surgical operation**	not complet
14.	**Unload** any **dishwasher** and put everything away	no
15.	Compete in the game show **Jeopardy!**	ok
16.	**Write clickbait** articles fully automatized	ok
17.	**Write math**ematical articles fully automatized	not completely

Beispiel: Machbar vs. gefährlich

Technologie: Computer Vision mit Deep Learning

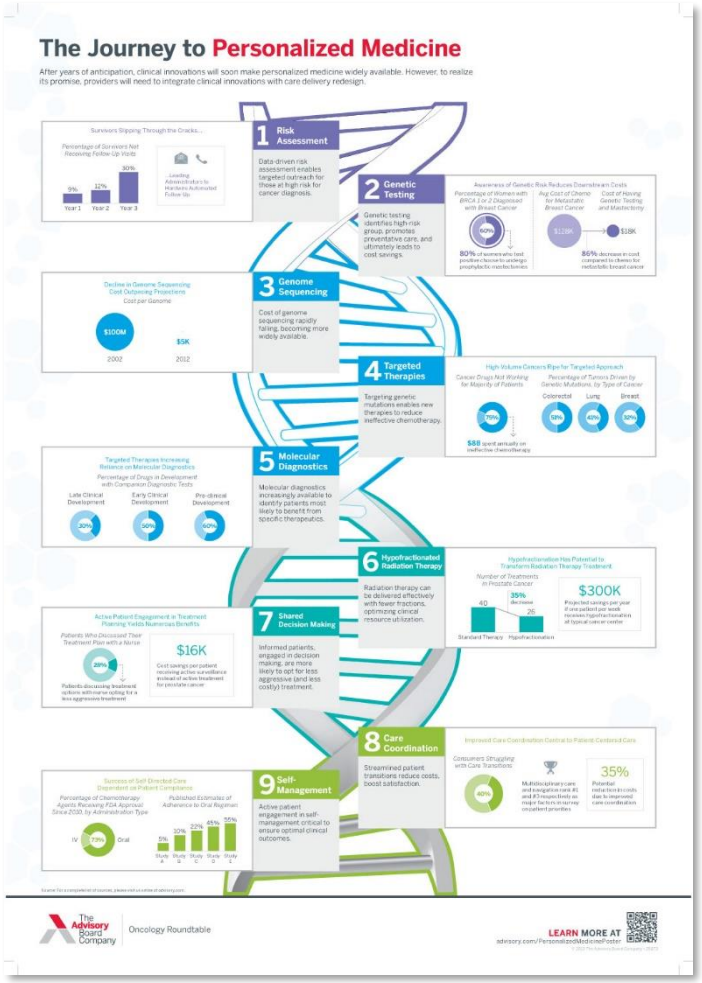
Beispiel: Markterfolg vs. regulatorische Hürden

Technologie: Recommender Systems



Gefahren durch KI?

- KI ist per Definition eine “**dual use Technology**”
  → siehe Report von Brundage et al., 2018
- Aber: “**natürliche Dummheit**” ist die grössere Bedrohung
- **Algorithmische Ethik** und **erklärbare KI** sind in den letzten Jahren zu einem top Forschungsfeld geworden – nicht wegen der unkalkulierbaren Risiken per se, sondern:

Deep neural networks can now transfer the style of one photo onto another

And the results are impressive

by James Vincent | @jjvincent | Mar 30, 2017, 1:53pm EDT

You've probably heard of an AI technique known as "style transfer" — or, if you haven't heard of it, you've seen it. The process uses neural networks to apply the look and feel of one image to another, and appears in apps like Prisma and Facebook. These style transfers, however, are stylistic, not photorealistic. They look good because they look like they've been painted. Now a group of researchers from Cornell University and Adobe have augmented

Intro

What if you could imitate a famous celebrity's voice or sing like a famous singer? This project started with a goal to convert someone's voice to a specific target voice. So called, it's voice style transfer. We worked on this project that aims to convert someone's voice to a famous English actress Kate Winslet's voice. We implemented a deep neural networks to achieve that and more than 2 hours of audio book sentences read by Kate Winslet are used as a dataset.

Model Architecture

This is a many-to-one voice conversion system. The main significance of this work is that we could generate a target speaker's utterances without parallel data like <source's wav, target's wav>, <wav, text> or <wav, phone>, but only waveforms of the target speaker. (To make these parallel datasets needs a lot of effort.) All we need in this project is a number of waveforms of the target speaker's utterances and only a small set of <wav, phone> pairs from a number of anonymous speakers.

Image Completion with Deep Learning in TensorFlow

August 9, 2016

- Introduction
- Step 1: Interpreting images as samples from a probability distribution
  - How would you fill in the missing information?
  - But where does statistics fit in? These are images.
  - So how can we complete images?
- Step 2: Quickly generating fake images
  - Learning to generate new samples from an unknown probability distribution
  - [ML-Heavy] Generative Adversarial Net (GAN) building blocks
  - Using $G(z)$ to produce fake images
  - [ML-Heavy] Training DCGANs
  - Existing GAN
  - [ML-Heavy]
  - Running DC
- Step 3: Finding the

The amazing power of word vectors

APRIL 21, 2016

For today's post, I've drawn material not just from one paper, but from five! The subject matter is 'word2vec' – the work of Mikolov et al. at Google on efficient vector representations of words (and what you can do with them). The papers are:

- **Efficient Estimation of Word Representations in Vector Space** – Mikolov et al. 2013
- **Distributed Representations of Words and Phrases and their Compositionality** – Mikolov et al. 2013
- **Linguistic Regularities in Continuous Space Word Representations** – Mikolov et al. 2013
- **word2vec Parameter Learning Explained** – Rong 2014
- **word2vec Explained: Deriving Mikolov et al's Negative Sampling Word-Embedding Method** – Goldberg and Levy 2014

From the first of these papers ('Efficient estimation…') we get a description of the *Continuous Bag-of-Words* and *Continuous Skip-gram* models for learning word vectors (we'll talk about what a word vector is in a moment…). From the second paper we get more illustrations of the power of word vectors, some additional information on optimisations for the skip-gram model (hierarchical softmax and negative sampling), and a discussion

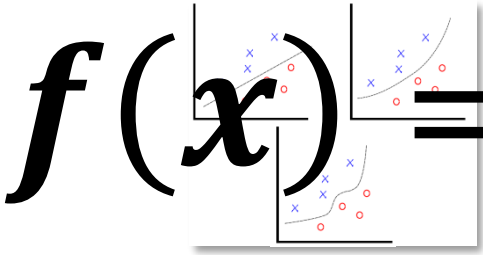
Wie geht das?

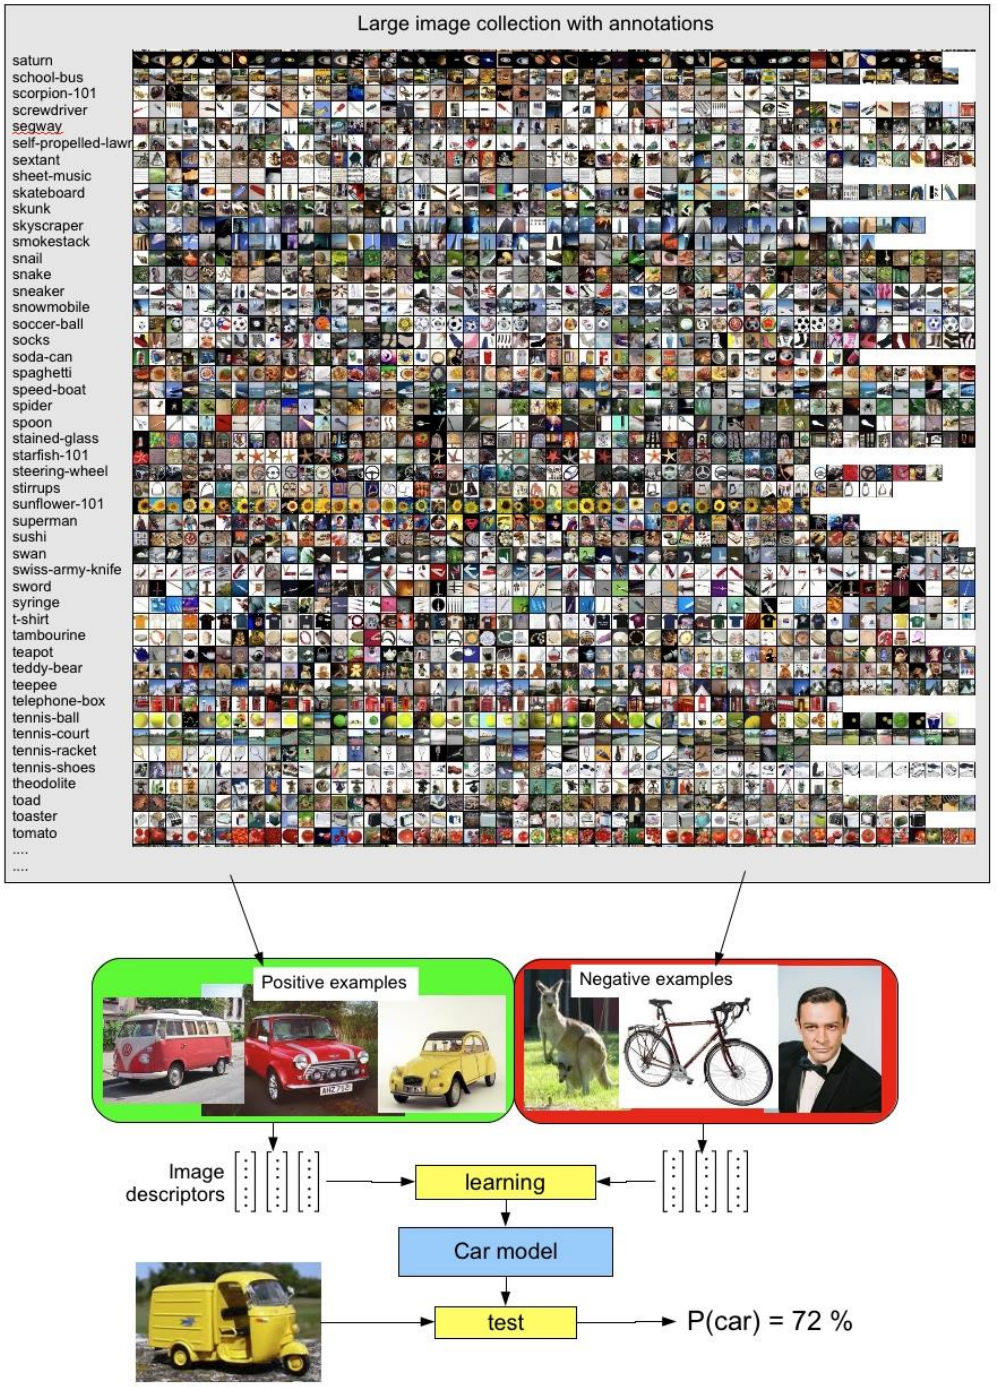
Grundlage
Induktives überwachtes Lernen

Annahme
- Ein an *genügend viele* Beispiele angepasstes Modell…
- …wird auch auf unbekannte Daten **generalisieren**

Methode
- **Suchen der Parameter einer gegebenen Funktion**…
- …so dass für alle Beispiele Eingabe (Bild) auf Ausgabe («Auto») abgebildet wird

$$f(\boldsymbol{x}) = y$$

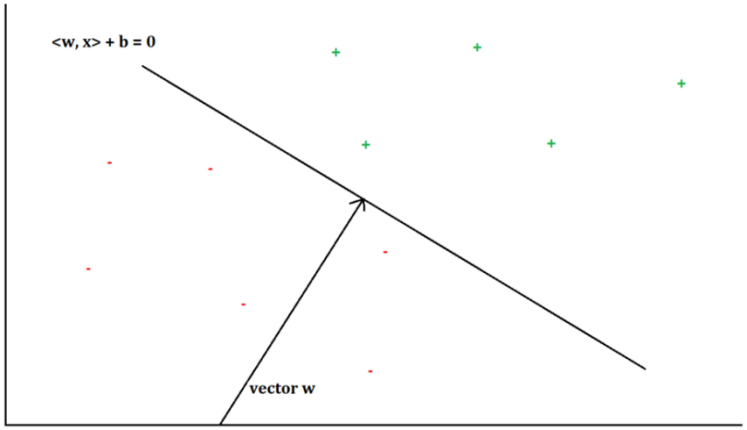


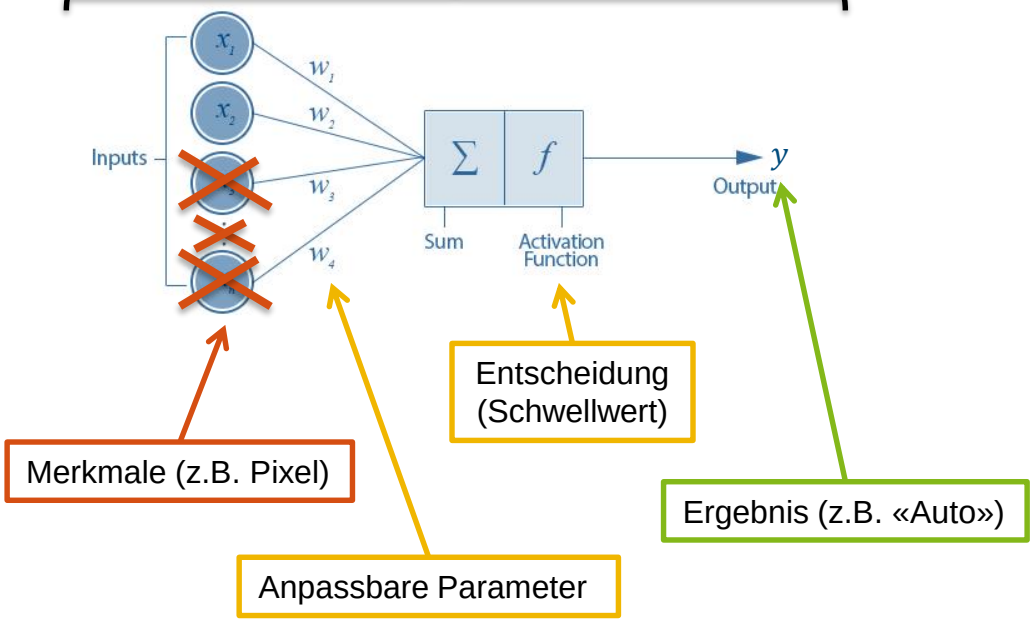


Quelle: http://lear.inrialpes.fr/job/postdoc-large-scale-classif-11-img/attribs_patchwork.jpg

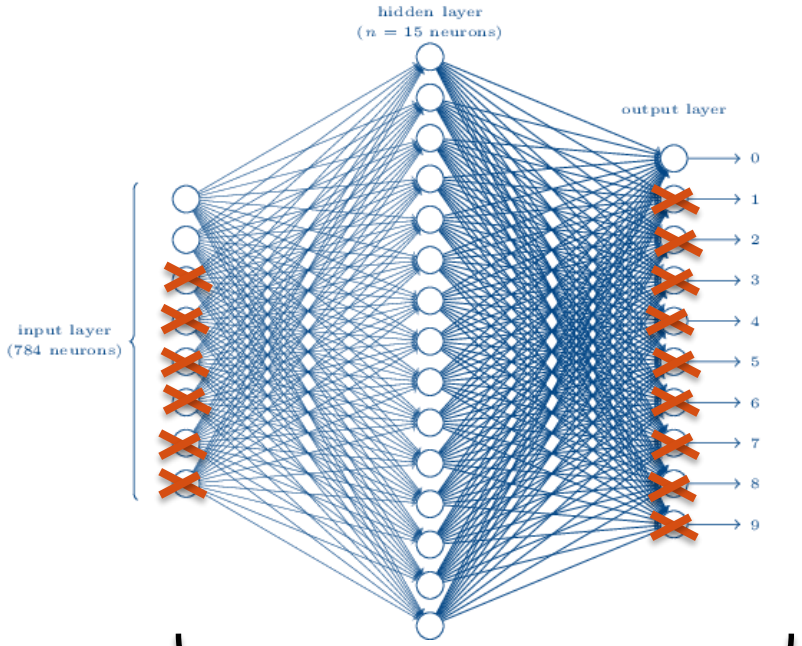
Suche der Parameter *einer Funktion*?

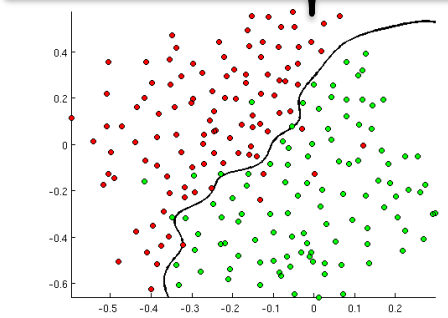
Neuron





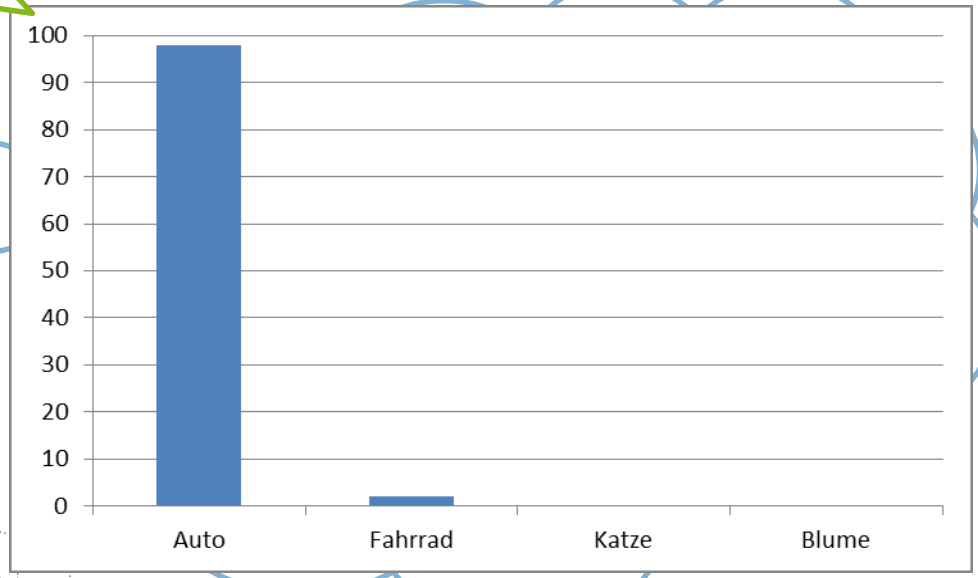
Neuronales Netz





Suche der Parameter einer Funktion?

Wahrscheinlichkeit [%] für bestimmtes Ergebnis



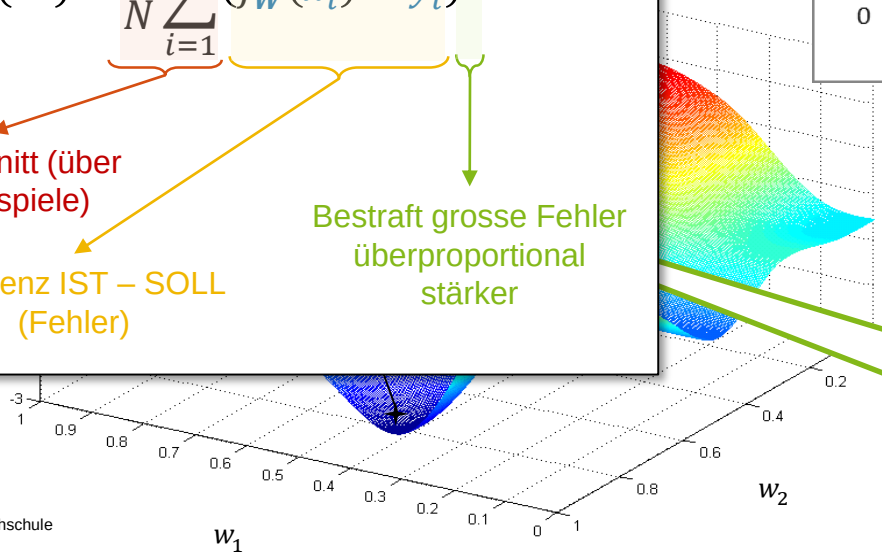
- Unser Neuronales Netz: $f_W(x) = y$
  mit Bild x, echtem Resultat y und Parametern W
  ($W = \{w_1, w_2, \ldots\}$ anfangs zufällig gewählt)
- Fehlermass: $l(W) = \frac{1}{N}\sum_{i=1}^{N}(f_W(x_i) - y_i)^2$
  Durchschnitt der quadratischen Abweichungen
  über alle Bilder (Loss)

$$l(W) = \frac{1}{N}\sum_{i=1}^{N}(f_W(x_i) - y_i)^2$$

Durchschnitt (über alle Beispiele)

Differenz IST – SOLL (Fehler)

Bestraft grosse Fehler überproportional stärker



← Fehlerlandschaft

Methode: Anpassung der Gewichte von f in Richtung der steilsten Steigung (abwärts) von J

Schlussfolgerungen

- Deep Learning hat zu Paradigmenwechsel in *Mustererkennungsaufgaben* geführt
- Die Zeit vom Grundlagenresultat zur praktischer Anwendung beträgt wenige Monate
- Es gibt Methoden zum Hineinschauen in neuronale Black Boxes (siehe Anhang)
- «~~Denkende~~ rechnende» Maschinen sind trotzdem nur *insel(-hoch-)begabt*
  ➔ *Herausforderungen bestehen im Bereich Robustheit, Interpretierbarkeit, rechtl. Stellung*

Developing for algorithmic fairness

The FAT ML code of conduct

See http://www.fatml.org/resources/principles-for-accountable-algorithms

Purpose

- Help developers to **build algorithmic systems in publicly accountable ways**
- Accountability: the **obligation to report, explain, or justify** algorithmic decision-making & **mitigate** any **negative** social **impacts** or potential harms

Premise

- *A **human ultimately responsible** for decisions made/informed by an algorithm*

Principles

Make available somebody who will take care of adverse individual / societal effects

Explain any **algorithmic decision** in non-technical terms to end users

Report all **sources of uncertainty** / error in algorithms & data

Enable 3rd parties to **probe & understand** system **behavior**

Ensure algorithmic **decisions are not discriminatory** w.r.t. to people groups

Making it actionable

- **Publish** a **Social Impact Statement**
- …use above **principles as a guiding structure**
- …**revisit three times** during development process: design stage, pre-launch, post-launch
